A. Overview

This document describes the expectations of students seeking the PhD in Health Services Research and Health Policy and faculty who supervise students in the program. Students should also consult the Laney Graduate School handbook (https://gs.emory.edu/handbook/). In the event of a conflict, the Graduate School handbook supersedes this one.

B. Program objectives

Following completion of the program, students should be able to:

1. Describe major problems in health services and policy that are have or are currently the focus of research.
2. Apply concepts from economics and organizational theory to frame and understand research questions in health services and policy
3. Apply economics or organizational theory methods to relevant research questions in health services and policy
4. Effectively communicate concepts and methods of health services and health policy research to students, professionals, and other stakeholders
5. Conduct a health services or health policy study, suitable for a peer-reviewed publication, as an independent researcher

C. Advancing from pre-candidacy to candidacy

The program is divided into “pre-candidacy” and “candidacy” phases. To complete the pre-candidacy phase, students must:

- Pass all classes required by the Laney Graduate School and School of Public Health (see section D.1)
- Pass classes required by the program (see sections D.2, D3 [economics track], and D4 [organizations and management track])
- Take at least 12 credit hours of approved methods classes (see section D.5)
- Take at least 9 credit hours of graded classes per semester in their first and second year
- Complete 54 credit hours in 500 level or above courses
• Have a minimum 2.7 grade point average with no incomplete or in-progress grades
• Pass the general- and track-specific comprehensive exam

Students should enter candidacy as soon as all requirements have been completed. Students will need to complete the Application for Admission to Candidacy form from the Laney Graduate School and upload the form in CollegeNet.

Students must reach candidacy by September 15 of their fourth year. Students who do not meet this deadline will be placed on academic probation, will not be eligible for professional development and support funds, and may forfeit financial support. These sanctions will be lifted when the student enters candidacy.

Students and faculty can keep track of progress towards the degree using the Degree Tracker tool in OPUS (Emory’s online grading system).

The table below summarizes all of the requirements to complete the degree.
Requirements to complete the PhD, Doctoral Program in Health Policy and Health Services Research

Complete 54 credit hours at the 500 level or above with a 2.7 minimum GPA.

Complete the following classes required by the Laney Graduate School/School of Public Health
- TATTO 600
- TATTO 605
- PUBH 700
- PUBH 701
- JPE 600
- JPE 610

Complete the following classes required by the Department
- HPM 730: Theory based research design
- HPM 720: Doctoral seminar in health policy
- HPM 770 Organizational Science in Health Care

Complete track specific coursework

</table>

Take at least 9 credit hours of graded coursework per semester in the first and second year.
Complete 12 credit hours of approved methods classes
Pass the general, program comprehensive examination
Complete and defend the dissertation

D. Coursework

Each class is associated with a certain number of “credit hours”, generally 3-4. Students must maintain a minimum of 9 credit hours to receive their stipend and the tuition waiver.

Our program expects students to take a minimum of 9 graded credit hours per semester (fall and spring) in their first and second years. Students should and do take more except under unusual circumstances. The 9 credit hour requirement does not include classes taken on a pass-fail basis or directed study. The Director of Graduate Studies can make exceptions on a case-by-case basis. Prior to enrolling in courses, students should send an email to their advisor and the Director of Graduate Studies with their proposed course list.
If you sign up for “research credit” (HPM 798R Pre-candidacy research) or “directed study” (HPM 597R Directed study), you will receive credits that count towards the 54 credit requirement. These are graded on a pass/fail basis. A student who takes 9 credit hours of research credit or directed study in a given semester will be eligible to receive their stipend and tuition waiver. However, these credit hours do not count as graded courses and so do not aid in meeting expectations for coursework completed during the first and second years (see paragraph above).

D.1 Coursework required of all Rollins School of Public Health doctoral students

TATTO 600 (1 credit). The TATTO program prepares students to teach. When students have prior teaching experience, the Laney Graduate School may waive the TATTO requirement. More information is available here: https://gs.emory.edu/handbook/academic-affairs/phd/tatto.html. TATTO 600, the first course in the TATTO sequence, teaches students how to run and teach a university-level course. It is offered in the late summer but appears on the fall transcript. Ideally students should take this class when entering the program. But students in the economics track usually take this class between the first and second year, because it conflicts with “math camp” (ECON 526 Quantitative Methods I, which is also offered in August).

TATTO 605 (2 credits). Students will serve as a teaching assistant for any Emory course and, under the guidance of the faculty member, cultivate teaching skills. During the semester, students should register for TATTO 605. Students must have completed at least 18 credits. The teaching assistantship is unpaid. Students are eligible to take paid assistantships later on.

PUBH 700 (0 credits). This course covers the foundations for public health and is only required for students without a masters degree in public health.

PUBH 701 (1 credit). This class provides students with “the tools to develop a personal strategy for successfully navigating the doctoral experience.” Students must earn a B or higher.

JPE 600 (0 credits). The course, part of the Jones Program in Ethics, introduces students to research ethics. It is offered in mid-August. Students should take this course as soon as possible, but they can take it after entering candidacy.

JPE 610 (0 credits). The second part of the Jones Program in Ethics, students must participate in at least four Jones Program in Ethics-designated workshops, training sessions, or lectures. This class can be completed after students enter candidacy.

D.2 Coursework required of all health policy doctoral students

HPM 730. Theory based research design (4 credits). This course introduces students to the major theoretical frameworks used in health services research and teachers students
how to use these to design and conduct research studies. Students should take it in the spring of the second year.

HPM 720: Doctoral seminar in Health Policy (2 credits per semester, 2 semesters). The course introduces students to health policy research and some of the major works in the field. In odd-numbered years, the course is offered in the spring. In even-numbered years, the course is offered in the fall.

HPM 770: Organizational Science in Health Care. This seminar explores how organization science—broadly defined as research on topics related to management, organizational behavior, organizational theory—informs health services research and practice. We will examine key topics in organization science that have relevance for health care organizations and professionals. We will review the theories and empirics of classic and contemporary organizational research conducted in the health care context. (We have submitted documents for approval of this course as part of this proposal.)

Methods classes (various). Students need to complete 12 credits of graded methods classes (preferably more) (see section D.5). Students with prior methods coursework may seek approval from the Director of Graduate Studies to reduce the number of required methods courses.

In addition to these classes, students are expected to attend health policy seminars in the department and, for students in the economics track, presentations in the Department of Economics applied microeconomics seminar. Students should also complete CITI training, which is an online short course on ethical human subjects research. CITI training is available through Emory’s Institutional Review Board. In most cases, a CITI certificate of completion will be required for students who want to collaborate with faculty on research.

D.3 Track-specific coursework: economics

The economics track prepares students to apply economic theory to evaluate topics in health and health policy. The following classes are required. At least one of the health economics classes can be completed after students enter candidacy.

ECON 526 Quantitative Methods I, (aka Math Camp) (4 credits). The course, also known as “math camp”, covers the quantitative tools students will need to complete the economics sequence. Students take it before fall of the first year. It is offered in August (in 2021, August 9th through the 24th). It appears on the fall transcript.

ECON 500 Microeconomic theory I (4 credits). This course is taken the fall of the first year.

ECON 501 Microeconomic theory II (4 credits). This course is taken the spring of the first year.
ECON 770 Health economics I (4 credits). This covers the “demand side” of health economics: i.e., the factors that shape health and health behavior. It is offered every other year. Students entering in even-numbered years should take it in the fall of the second year. Students entering in odd-numbered years should take it in the fall of the third year.

ECON 771 Health economics II (4 credits). This covers the “supply side” of health economics: i.e., physician behavior, the industrial organization of health care markets, etc.. It is offered every other year. Students entering in even-numbered years should take it in the fall of the third year. Students entering in odd-numbered years should take it in the fall of the second year.

Elective: Students should take at least one other graduate-level economics course.
Economics-track course sequence for students entering in an even-numbered year

Students need to enroll in at least 9 credits per semester and accumulate 54 credits to advance to candidacy.
D.4 Track-specific coursework: organizations and management

The track examines the management of health care systems and public health organizations and the implementation and dissemination of policies and practices within and across organizations. The organizations and management track will prepare students to examine questions pertaining to access, quality, cost of health care and health outcomes by learning more about organizational theory as it pertains to healthcare and rigorous methodological training. Students will understand how to improve organizations using patterns of organization design and behavior.

The following classes are required.

BUS 701 Survey of Business Research Methods. In this course, students will examine the basic concepts underlying research in the social sciences and the process of doing research. The course addresses the principles of good design while covering several empirical research methods used by scholars in the business disciplines to understand decision making in markets and organizations. The course focuses on basic research methodology. It is not meant to provide a theoretical background in any particular area, but to provide principles and tools for making good use of theory. We also cover ethical issues in research.

BUS 732 Organization Theory. This is a research seminar in Organization Theory. It is intended for doctoral students who wish to learn the academic field and its current developments. It is also designed to help students learn to use the ideas of the field in research projects of their own design. The focus is on theoretically driven classic and contemporary research, especially that originating in sociology.

BUS 734 Research in Organization & Management. This course explores the domain of micro-level research, also known as organizational behavior (OB), which includes the study of individuals and groups within organizations. The disciplinary foundations for the body of research reflected in this course are psychology, social-psychology and sociology. We will review classics and contemporaries, theories and empirics, and interesting contradictions and consistencies.

HPM 520 Introduction to Health Economics. Students should take this class in the fall of the first semester. It covers the basics of microeconomic theory and its application to health care markets and medical care.

In addition to these required classes, students need to take at least one elective from the following list.
• OAM 737 Doctoral Seminar in Social Psychology
• FIN 504 The Business of Healthcare
• BUS 506 Strategy and Organization in Healthcare
• GHD 706 Advanced Topics in Implementation Science and Evaluation
• MGT 7105 Individual Behavior in Organizations
• MGT 7106 Group Dynamics
• MGT 7107 Organizational Theory
• MGT 7102 Organization Behavior Research Methods

OAM 737 Doctoral Seminar in Social Psychology. This course aims to provide a broad and rigorous grounding in social psychology for doctoral students in linked fields. Some familiarity with scientific (particularly experimental) methods and statistical methods is assumed. Social psychology is the study of the normal behavior of humans, especially humans in interaction. It is a foundational discipline for many applied social sciences (organizational behavior, consumer behavior, behavioral accounting, public health) and a sister discipline for many basic social sciences (sociology, clinical psychology, cognitive psychology).

FIN 504 The Business of Healthcare. This is an elective course for MBA students. This course provides students with an overview of the current structure in the healthcare industry and an understanding of the complex inter-relationships among the players in the industry. The course explores the fundamental business models used by various players in the industry including providers, innovators, insurers, employers, and government regulators. Students will become familiarized with the economic incentives and important issues which must be addressed for individual players to create value in the U.S. healthcare system. Students will leave the course with the ability to frame the important questions required to evaluate potential business strategies and operational issues in each sector of the healthcare industry.

BUS 506 Strategy and Organization in Healthcare. This is an elective course for MBA students. This course addresses critical strategy issues in the healthcare sector. These issues include: regulation and strategic opportunities and constraints, strategic challenges in healthcare delivery, industry focus on pharma and medical products, and executing strategy amidst changing regulatory and funding settings.

GHD 706 Advanced Topics in Implementation Science and Evaluation. The course aims to introduce students to methods for translating scientific knowledge into real-world practice and policy. The course covers topics around identifying and appraising the evidence base, assessing, and addressing barriers that impede implementation of proven interventions, designing innovative solutions and studies to test these, and concepts of decision science to promote implementation and sustainability of proven interventions. Throughout the course, students are exposed to case studies of global health interventions which illustrate implementation science concepts while evoking discussion and critical thinking.
MGT 7105. Individual Behavior in Organizations. (Georgia Tech) This course for PhD students is designed to investigate organizational behavior research topics at the individual level of analysis.

MGT 7106 Group Dynamics. (Georgia Tech) This course for PhD students provides a fundamental understanding of group processes in organizations by analyzing and critiquing classic and contemporary theories and research on groups.

MGT 7107 Organizational Theory. (Georgia Tech) This course for PhD students provides a review of contemporary organizational theories, and empirical studies. Students will learn frameworks to understand organizational structures, environments, and goals.

MGT 7102 Organization Behavior Research Methods. (Georgia Tech) This course for PhD students is offers an overview and analysis of research methodologies used in conducting scientific research of organizational behavior.

**FT:** The course appears on the fall transcript
**CR:** The actual number of credits may differ
Students need to enroll in at least 9 credits per semester and accumulate 54 credits to advance to candidacy.
D.5 Methods classes

Students need to take a minimum of 12 graded credits of methods classes. The following are approved methods classes. Students can count methods classes not on this list with the approval of the Director of Graduate Studies and their advisor. Students should make sure that some of their methods classes cover regression.

HPM 522 (4) Economic evaluation of health care programs
HPM 585 (3) Quantitative methods 1
HPM 586 (3) Quantitative methods 2
HPM 587 (1): Advanced research methods
HPM 533 (3): Qualitative Methods for Health Services Research (mixed methods)
GH 522 (3): Qualitative Research Methods in Global Health
GH 543: (2) Fundamentals of Qualitative Analysis
EPI 536 (2) Applied Data Analysis
EPI 518 (2) Practical Introduction to Survey Design
EPI 530 (4) Epidemiologic Method I
EPI 540 (4) Epidemiologic Method II
EPI 550 (4) Epidemiologic Methods III
EPI 568 (2) Bias Analysis
EPI 738 (2) Advanced Epidemiologic Methods I

POLS 509 (3) Linear Models
POLS 571 Longitudinal Data Analysis
ANT 560 (3) Cultural Methods
ANT 585 (3) Special Topics – Statistical Methods
PSYCH 560 – Advanced Statistics
PSYCH 561 Multiple Regression and the General Linear Model
BSHES 538 (3) Qualitative Methods for Research
BSHES 539 (3) Qualitative Data Analysis
GSU ECON 8899 Causal Inference

E. Comprehensive examinations

In June of the second year, students will take a general comprehensive examination. Students will take track-specific exams in the winter of the third year. Students in the economics track can opt to take the microeconomics and econometrics examinations in the economics department in lieu of the track-specific exam.

The general exam will be written and graded by three HPM faculty members. Prior exams are available from the DGS. Track-specific exams will be graded by two faculty members. In the event of a disagreement, a third will break the tie. Grading will be blinded, and based on a rubric that will be available before the exam. Students must pass all questions on the exam.

Students must pass both the general and track-specific exams to advance in the program. Students who would like to dispute their grade should send an email to the Director of Graduate Studies addressing feedback from the faculty. The Director will review the response with the grading committee.

If students fail either exam, they will have an opportunity to take a second examination within two months after the initial exam.

Students who fail the exam a second time will not advance in the program, and will be awarded the MS in Health Services Research assuming satisfactory completion of other requirements.

F. The dissertation

F.1 What counts as a dissertation?

Students must conduct and write original research, either in the form of three papers or a single monograph. At a minimum, the papers should be publishable in a peer-reviewed journal. The dissertation should also be at or near the cutting-edge of the field.
dissertation should represent a significant contribution to the body of knowledge, as determined by the dissertation committee.

F.2 The dissertation committee

Students should assemble a dissertation committee once they have entered candidacy. Committees usually have three to four members, of whom three must be Laney Graduate School faculty (Laney Graduate School faculty are Emory professors with primary appointments in departments with doctoral programs.) The fourth committee member need not be an employee of Emory but should have research experience. Non-Emory committee members require approval of the Director of Graduate Studies and the Dean of the Graduate School of Arts and Sciences. At least one of the committee members must be a tenure-track faculty member with a primary appointment the Department of Health Policy and Management.

If the committee changes after its formation, the student should work with the Director to submit a change of committee form to the Laney Graduate School.

F.3 Progress

At the beginning of each semester, students and advisors could complete and sign a form that lists goals for the upcoming semester and send the completed form to the Director of Graduate Studies. Failure to achieve the goals may result in the student receiving an unsatisfactory for the semester (see F.5).

F.4 The dissertation proposal

The dissertation proposal should outline the intended work for the dissertation in detail sufficient for the committee to assess 1) the significance of the work and 2) the student’s ability to complete the outlined research in a reasonable period. The exact form of the proposal is negotiable between the student and his or her committee, but generally there should be a written document of about 10 pages (single spaced) in length and a presentation.

The student must obtain approval of the proposal, following the presentation, by the dissertation committee and the Director of Graduate Studies. Once the proposal is approved, students must submit a Dissertation Committee Signature Form to the Laney Graduate School. Students need to receive approval from the Graduate School by March 15th of their four year or they will be placed on probation.

F.5 Following the proposal

Students’ advisors and committees should regularly monitor progress towards completion of the dissertation. If the student is making adequate progress, the advisor will assign a satisfactory grade for the doctoral thesis research credits. Otherwise, the student will receive an unsatisfactory and be placed on probation. The student, the committee, and the Director of Graduate Studies will need to develop a remediation plan with measurable
goals toward research progress. If these goals are not met during the following term, the student will receive a second unsatisfactory. Students are dismissed from the program after three terms on probation.

F.6 Form of the dissertation

We will accept two types of dissertations: 1) the traditional book-length form or 2) three publishable papers. Ideally, at least two of the three will be on a related theme. None should consist of work started or completed prior to time when the student enters the program. For doctoral candidates choosing the three-paper option, co-authorship is permitted, but the candidate should be the first author on all three papers, reflecting the candidate having played the primary role in developing the study idea and executing the analysis. We will consider exceptions on a case-by-case basis in the event the author is writing a paper targeted for a field or journal where listing of authors in alphabetical order is the norm. Co-authorship between doctoral students is permitted, but the paper can only count toward one student’s dissertation.

F.7 Authorship

Authorship should be determined by the student in consultation with the dissertation committee. The student should be first author. Authorship should be reserved for committee members or other colleagues who have made substantial contributions to the dissertation. Students and committee members should consult journals’ authorship guidelines. But simply serving as a dissertation committee member and performing the routine duties of a dissertation committee member is not a significant enough contribution to justify authorship.

F.8 The dissertation defense

Ph.D. proposals and dissertations must be defended at a formal examination in which the student has the opportunity to discuss and answer questions regarding the proposed or finished work. Students should schedule defenses at least three weeks in advance and notify the Director of Graduate Studies. Committee members should receive a draft of the dissertation at least four weeks prior to the defense.

The exact form of the defense will be left to the student and the committee. Generally, students should plan on presenting their work for 30 to 45 minutes, followed by 30 or so minutes for questions from committee members and the audience. Presentations can devote equal time to all of the components of the dissertation or focus on the greatest contribution.

After the examination, the student will be asked to leave the room, and the committee will decide whether the dissertation passes, fails, or is incomplete. The Committee may pass the dissertation conditional on the student making revisions. All faculty members of the committee should be at the defense. Defenses should be scheduled with LGS deadlines for degree award dates in mind.
If the committee approves the dissertation, members should sign the Doctoral Completion Form and the Approval Sheet. Submit the sheet to the Laney Graduate School through the online portal and email a copy to the Director of Graduate Studies. You should submit your final dissertation to the Electronic Theses and Dissertation (ETD) portal.

Information about formatting dissertations and submitting degree completion paperwork to the Laney Graduate School is available here: https://www.gs.emory.edu/academics/completion/submit/phd-completion.html

G. Master’s of science in health services research

Under extraordinary circumstances, students admitted to the doctoral program may leave the program before completing the requirements for a PhD, either of their own volition or as a result of departmental action. Under these circumstances, students may elect to receive a Master’s of Science in HSR. However, all Laney Graduate School requirements for the Master’s degree must be satisfied. The requirements for the Master’s degree are specified in the Laney Graduate School Handbook: http://www.gs.emory.edu/uploads/academics/LGS%20Handbook.pdf

Additionally, 48 credit hours of course work must be completed with a grade of B or better. The DGS must review and approve all requests for consideration of a terminal MS degree prior to the submission of the request to the Laney Graduate School.

H. Tuition and stipends

Subject to conditions on grade point average and credit hours (9 per semester), described in the Laney Graduate School handbook, students in the program will receive free tuition and a stipend for a period of up to five years. Students will be responsible for nominal fees to cover the cost of support services. After the second year, students are strongly encouraged to obtain stipend funding by collaborating with faculty on grant-funded research. Students are encouraged to apply for dissertation grants.

In exchange for stipends, students without funding support secured through grants or other funded work will be required to assist the department with teaching, research and/or doctoral program administration for up to 20 hours per week.

Students will receive their first stipend payment, covering half a month, on August 31st.

I. Employment

Doctoral students can receive payment for work at Emory (for example, as teaching or research assistants) over-and-above their stipend (which covers 20 hours per week) for no more than 10 hours per week. Students who want to work more than 10 hours must receive permission from the Director of Graduate Studies and the Associate Dean for Research.
If students are supported by a federal training grant (e.g., a NRSA, F30/F31, an Institutional training award, or T32) they may not receive additional pay (including the 10 hours) from another federal grant.

J. Professional development

J.1 Seminars

Students are expected to regularly attend and participate in the department research seminar(s) and seminars of interest in other departments. Students in their second year and beyond are strongly encouraged to sign up and present their own or collaborative work to practice and further develop their research presentation skills.

J.2 Keeping abreast of the field

Students are encouraged to keep track of developments in health policy and their respective fields as soon as they enroll in the program. Students should subscribe to the Kaiser Daily Health Policy Report (sign up at https://khn.org/morning-briefing/) and journal table-of-contents. Suggested journals include the New England Journal of Medicine, the Journal of the American Medical Association, Health Affairs, Health Services Research, Medical Care, the American Journal of Health Economics, the Journal of Health Economics, Health Economics, Value in Health, the Journal of Health Politics, Policy, and Law, Inquiry, Medical Decision Making, and other top field journals as the student becomes more specialized in their fields of interest.

J.3 Professional meetings

Presentation of research at professional meetings is an integral part of developing a research portfolio. First-year students will receive financial support to travel to the Academy Health Annual Research meeting. In the second year and beyond, as funds allow and in coordination with the DGS, students who have their work accepted for presentation at national meetings will be provided financial support for registration and travel in accordance with Emory and LGS policies. Generally, the department will provide funds for at least one meeting per student per year, with additional meetings being subject to budget availability. Students are strongly encouraged to exhaust other sources of funding for travel first.

J.4 Recommended resources

There is an online program, The Dissertation Success Curriculum, designed to help doctoral student develop good scholarly habits and track their progress. Emory has an institutional membership, so it is free to you.

The book The Professor is In, by Karen Kelsky, covers the job search process. There is also a related blog: https://theprofessorisin.com/.
Another great resource, available online, is *An Unofficial Guidebook for PhD Students in Economics and Education.*

Students should always work to become better writers. Some good resources are *How to Not Write Bad* by Ben Yagoda and *Writing to Persuade* by Trish Hall.

The Laney Graduate School offers many professional development resources and has sessions on professional development and careers, which usually occur in early spring.

**K. Grievance and conflict resolution**

Students should initially bring conflicts with peers, instructors, advisors, and committee members to the Director of Graduate Studies. Ideally, students should provide a written summary of the issue before meeting the Director. If the Director cannot resolve the issue, he will appoint a committee of three faculty members who will review the grievance and/or mediate the conflict. In the event this step fails, or the grievance or conflict involves the Director of Graduate Studies, the grievance should be brought to the attention of the Office of the Senior Associate Dean of the Laney Graduate School. From this point forward, the grievance will be handled according to the Grievance Procedure outlined in the Laney Graduate School Handbook.

**L. Mentoring**

Incoming students will be assigned an advisor. Students may change advisors at any time but should do so in consultation with the existing advisor and mentor, and, if needed, the Director of Graduate Studies. In exceptional cases the student may, in consultation with the Director of Graduate Studies, select a secondary mentor who is not a full time faculty member with a primary appointment in the Department of Health Policy and Management. Once the student has selected a dissertation committee, the chair of the committee becomes the student’s advisor.

The advisor should provide regular guidance to the student on course selection, research projects, and funding opportunities. The student and advisor should meet at least once a semester. Additional mentoring related resources are at [http://www.gs.emory.edu/professional-development/mentoring.html](http://www.gs.emory.edu/professional-development/mentoring.html).

**M. Conduct**

Students should not cheat, plagiarize, or engage in scientific misconduct or fraud. Students should refer to the Rollins School of Public Health honor code ([https://www.sph.emory.edu/rollins-life/enrollment-services/honor-code/index.html](https://www.sph.emory.edu/rollins-life/enrollment-services/honor-code/index.html)) and the National Institutes of Health’s Research Misconduct definition ([https://grants.nih.gov/policy/research_integrity/overview.htm](https://grants.nih.gov/policy/research_integrity/overview.htm)). Students should treat each other, staff, and faculty with respect and handle disagreements civilly and
collegially. Violations of these rules and norms may result in expulsion from the program, following a vote by the tenure-track faculty of the department.

N. Students with disabilities

The program will make all reasonable accommodations for students with disabilities. Accommodations for classes are handled by the Office of Accessibility Services. Qualified students should register with the Office. Confidentiality is honored and maintained throughout the process. Students who need additional support should meet with the Director of Graduate Studies.

Information about the process for receiving accommodations is available here: LGS Accessibility Accommodations Support Process
